### **ATV CORP. INTRODUCES NEW 'PROWLER': LIGHT ISR COMMUNICATIONS PLATFORM**

FAYETTEVILLE, NC, June 18, 2002 — All Terrain Vehicle (ATV) Corporation today unveiled its newest *Prowler*, a Light ISR Communications Platform engineered to provide a singular combination of speed, range, maneuverability and reliability in rugged terrain. The new *Prowler* was introduced at NDIA's Special Forces Expo 2002.

The Company said its latest *Prowler* was designed to add a new dimension to current tactical, assault and support capability concepts and is complementary to existing larger, heavier platforms.

*Prowler* can be easily adapted to a wide range of tactical mission and support requirements because of the configuration versatility of its 350-pound payload and half ton towing capacity. The Company cited, for example, the *Prowler's* suitability for use as a Microponder™ platform, serving as a point designator for accurate aircraft ordinance delivery, outlining precise drop zones or performing as a pathfinder.

This vehicle's hallmark all terrain performance — agility, stability, endurance and nimble handling — is the result of *Prowler's*:

- powerful 660 cc., 4-stroke, liquid-cooled engine
- fully automatic 4 wheel drive transmission
- low center of gravity, tight turning radius, and ample (12") ground clearance
- front and rear independent wishbone suspension system
- dual front disc brakes and rear shaft braking system

Because of its small dimensional envelope (approximately 7'x 4'x 5') and light weight (795 lbs.), the *Prowler* is easily deployable and recoverable by the widest range of surface and aerial means. In addition, *Prowler's* ease of operation is enhanced by familiar automotive-style controls and engineering for minimal maintenance.

ATV Corporation's *Prowler*, a COTS product with worldwide logistic support in place, is currently in production. Two-person and unmanned versions of this new vehicle concept are in development.

ATV Corporation is a subsidiary of Phoenix International Systems, Inc. (Orange, CA), an ISO-9000 Certified SDVOSB that has been supplying state of the art COTS products in support of military ISR Operations since 1993.
